SUMMARY

IT Professional with over 6 years of experience across incident response, global networking, and client-facing support. I specialize in breaking down complex system failures into their core components through a disciplined, step-by-step investigative approach. A collaborative teammate who prioritizes clear communication and cross-functional coordination to implement long-term technical solutions. Eager to leverage a verbose background in troubleshooting and root cause analysis to protect enterprise assets in a dedicated Cybersecurity role.

EDUCATION/CERTIFICATIONS

Bachelor's Degree in Computer Science

University of Wisconsin - Madison • 2022

CompTIA Security+ Certification

Milwaukee, WI • 2026

EXPERIENCE

Systems Operations Engineer

Fidelity Information Services (FIS)

August 2022 - Present, Brown Deer, WI

- **Incident Detection & Log Analysis:** Analyzed complex application logs and transaction alerts to identify and mitigate 50+ potential disruptions weekly, performing deep-dive forensic audits that reduced recurring system downtime by 50%.
- **Incident Lifecycle & Problem Solving:** Managed the end-to-end lifecycle of 200+ monthly tickets, prioritizing a deep-dive understanding of core failure patterns to ensure 100% data integrity and comprehensive audit trails for regulatory compliance.
- **Network Operations & Change Management:** Led cross-functional teams during high-pressure emergency incidents to reduce MTTR, maintaining 99% connectivity uptime and validating 15+ weekly production changes for global data centers.

IT Support Specialist / Web Developer

UW Madison Division of Information Technology Help Desk

October 2019 - May 2022, Madison, WI

- **Technical Support Excellence:** Awarded "Agent of the Month" for providing top-tier, all-inclusive technical support to students and faculty; managed a high volume of requests across phone, email, and live chat with a focus on rapid problem resolution.
- **Strategic Project Leadership:** Led the large-scale transition of faculty and students to remote learning during COVID-19, developing comprehensive training materials and updating the technical knowledge base to ensure zero-day continuity.
- **Full-Stack Tool Development:** Optimized internal workflows by developing and maintaining web applications using SQL and JavaScript, streamlining administrative processes and improving data accessibility for the support team.

Electronics Team Member

Target Corporation

June 2016 – August 2018, New Berlin, WI

- **Customer Service:** Provided a friendly face of customer service, checking on people who may need assistance and anticipating their needs.
- **Recommendations & Advice:** Gave recommendations and insight into the latest technology, tailoring to their needs as a consumer.
- **Presentation:** Stocked shelves, cleaned up aisles, unlocked cases, and checked out customers.

PROJECTS

Practice SIEM & Malware Investigation

January 2026 – April 2026

- Responded to Critical, High, and Medium level alerts in Let's Defend practice SIEM tool. Investigating a wide range of issues, from CVE exploits with 9.8 CVSS ratings on user devices to phishing business email compromises.
- Simulated isolating infecting hosts, taking clear organized notes, researching CVEs, and determining next actions to harden and repair the infected devices along with protecting any other vulnerable machines/mitigating further exploitation.
- Investigated malware on virtual machines to understand the attacker's process, attack vector, and kill chain.
- Used tools such as Volatility to inspect virtual memory snapshots for digital forensics, IDA Decompiler and dnSpy for code analysis, and DIE to analyze the attacker executable and determine properties/obfuscation techniques.

Virtualized DMZ/Network Implementation

March 2026 – April 2026

- Created a multi-zone network (WAN/DMZ/LAN) using VirtualBox to isolate internal servers; deployed a pfSense virtual firewall gateway to manage traffic flow and enforce perimeter security.
- Deployed Windows Server 2025 on a virtual machine, implementing least-privilege user permissions and configured secure RDP access via pfSense firewall NAT rules for remote management from my local machine.
- Verified network security posture and connectivity using PowerShell, tcpdump, and ICMP reachability tests, ensuring all firewall rules correctly blocked unauthorized lateral movement.

AES Encryption Algorithm

December 2025

- Developed a functional AES-128 encryption pipeline in Python.
- Implemented the four-stage transformation rounds and the Rijndael key expansion schedule.
- Programmed custom Galois Field arithmetic and matrix multiplication logic to handle the mathematical diffusion and substitution layers.

SKILLS

Technical Skills

- **Networking & Security:** Firewall Configuration, Network Segmentation, Packet Capture VPN/RDP.
- **Systems & Virtualization:** Windows Server 2025, Active Directory, Entra ID, Virtual Machines, Linux.
- **Analysis & Operations:** Incident Response, Root Cause Analysis, Audit Analysis, Change Management.
- **Languages & Tools:** Python, Java, C++, SQL, and many more.
